Meeting Sep 24, 2026 at 22:46 BST

Meeting records [Transcript](#)

Summary

Website demonstration and feature review with layout feedback and navigation assessment

Website Context And Configuration

Demonstration of the hardware part database established core filtering mechanics. Sample PC configuration highlighted successful component selection workflows.

Pricing And Policy Review

Static pricing constraints required partner site cross referencing. Privacy policy and local storage implementations met project requirements.

Layout Suggestions And Conclusion

Proposed two column layout for build summaries to reduce vertical scrolling. Website navigation proved intuitive for general users.

Next steps

- ☐ [Jay D] Update Contact Form: Remove the unnecessary build number field from the contact form.
- ☐ [Jay D] Fix FAQ Formatting: Correct the capitalization of the letter I throughout the FAQ document.
- ☐ [Jay D] Reorganize Build Summary: Implement a two column layout for the build summary to reduce scrolling and increase information density.

- ☐ [Jay D] Enhance UI Clickability: Improve the intuitiveness of the parts list by adding an info column or highlighting clickable elements.

Details

- **Website Context and Purpose:** Jay D explained the core purpose of the website as a hardware part database and filter system for PC building, where users can assemble a build and navigate to partner websites like New Egg to purchase items rather than buying directly on the site (00:00:01). Ben A understood the concept and compared it to a filtering system (00:01:15).

- **Building a Sample PC Configuration:** Jay D asked Ben A to add a CPU, a storage component with a SATA interface, and a motherboard with an AM4 socket type (00:01:15). Ben A guided Jay D through the user interface to add an AMD Ryzen 5 5600X CPU, a Seagate storage device filtered by SATA, and an AM4 motherboard before navigating to the build summary page (00:04:35).

- Filtering and Sorting User Experience:** Ben A reviewed the browsing process and suggested adding a "clear all filters" button to streamline multiple filter operations. Regarding sorting, Jay D noted the default is low-to-high with an option for high-to-low, which Ben A considered reasonable ([00:06:52](#)).

- Part Details and Navigation Visibility:** Ben A inquired whether parts displayed more than just titles, prompting Jay D to clarify that users can click into individual parts for specifications. Because this feature was not initially obvious, Ben A recommended making it more prevalent or adding a dedicated "more info" column ([00:08:00](#)). Jay D noted that detail levels vary by part type, with motherboards being the most detailed ([00:08:57](#)).

- Account Requirements and Build Storage:** Jay D clarified that accounts are not required, and user builds are automatically preserved using local storage rather than traditional cookies, allowing builds to persist across tab sessions (00:09:44). Ben A considered whether multiple save profiles (such as Build 1 and Build 2) would be useful, but acknowledged the site is primarily intended for rare or one-time use (00:11:00).

- Pricing Information and Build Summary Improvements:** Ben A questioned whether pricing data was pulled dynamically or kept static, and Jay D explained that prices are static information due to terms of service, requiring users to cross-reference partner sites. Ben A suggested a quality-of-life update to display all pricing together and criticized the inclusion of blank or zero summary lines (like estimated wattage or memory) that lack meaning for certain parts (00:12:05). Additionally, Jay D demonstrated that currency conversion from pounds to USD or euros operates via an API (00:14:25).

Amazon and New Egg, Jay D noted they automatically search for the part name on the partner site rather than linking directly to the specific part due to API limitations ([00:18:57](#)). Ben A agreed this workaround is more than sufficient for the project assignment ([00:19:55](#)).

- **Interface Layout Suggestions and Final Conclusion:** Ben A proposed a two-column layout for the build summary page with items on the left and the summary on the right to reduce vertical scrolling and utilize empty screen space ([00:20:42](#)). Jay D acknowledged the feedback, and Ben A concluded that the website is intuitive enough to use easily, noting that even their dad could navigate it. Jay D expressed appreciation and concluded the meeting ([00:21:47](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

How is the quality of **these specific notes**? [Take a short survey](#) to let us know your feedback, including how helpful the notes were for your needs.
